PANGAIC NETWORK

Bringing freedom back to physical medium of networks

Aleksi Suomalainen

September 17, 2016

Background

Physical access to the Internet is not free, as in price or freedom

Protocols used to access the Internet are getting antiquated

There is no equal access principle in terms of bandwidth and latency

Pangaic network

Within terms of physical access, two possible options are studied

Dark Matter

Dark Energy
The only thing needed is to manipulate either one or some other physical medium in order to transmit binary data
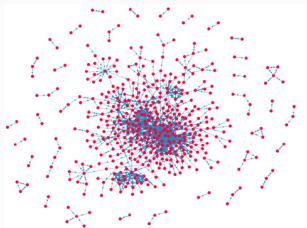

Pangaic network

Protocols used in the physical mediums have to be decentralized, either in distributed or p2p way

Blockchain technology has risen to become the medium for computing (Ethereum) and storage (Storj)

Bringing both together can potentially eliminate the need for complex/expensive devices

Future needs to be free
